

# evolution

Evolution combines durability and flexibility with striking aesthetics. The contemporary four-legged design is available with round, tapered or round height-settable leg frames. All feature the attractive detailing of mitred corners at the top of the leg frames and benefit from spacers under the ends of the worksurfaces to give the illusion of elegant floating tops.

With the choice of three leg frames, Evolution will adapt to any style or culture of the modern office. Each leg frame is attached to telescopic cross rails running underneath the full length of the worksurfaces. Modesty panels and horizontal cable management can be hung securely from the rear cross rail when required as optional extras.

The four legged design of the desking also minimises the footprint on the floor to help facilitate access to floor boxes without unduly restricting the placement of the furniture.

## technical information
